SOLAR FEED-IN TARIFFS 2017/18

Saturday, 20 May 2017

5:47:40 PM

I am writing this because of the unfair system currently in place in NSW regarding the solar feed in tariff. The current system instead of rewarding people for taking pressure off the energy supplies instead penalises them. We had our solar put on at the 20 cent feed in rate, we can purchase the same system now at half the price and have basically lost what little benefit we gained as like most people we work full time and conveniently (not for us) we still have no smart metre. It is time to increase the feed in tariff and bring us in line with other states in the country and should be mandatory for suppliers to offer. It should also represent the true community benefits and the environmental benefit of the solar system instead of solar representing a gigantic waste of time and money as it currently feels.
