

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Sunday, 21 May 2017

5:19:42 PM

I strongly support the proposed doubling of the NSW solar feed-in tariff. As an owner of a solar PV array, I resent paying several times the feed-in tariff for the electric energy I purchase from the grid, especially because my generation comes at a time of day when demand is great and wholesale prices are high. The feed-in tariff ought to reflect this fact, which inevitably applies to all solar PV generation. It would even be reasonable to expect a premium on the feed-in tariff, since solar generation reduces the need for fossil-fuel generated energy and its contribution to the increase in atmospheric carbon dioxide.
