Date of submission: Thursday, 26 April 2018

Submission: "Dear IPART,

There is one overwhelming threat facing the Human Race, and that is the imminent radical alteration of the climate brought on by the consumption of Fossil Fuels.

Domestic Solar Production is one of the best defences against this imminent disaster, and giving a fair, or even generous, Solar Feed-In Tariff is the best way to encourage the continuing growth of Domestic Solar.

It is immoral and stupid to condemn our grandchildren to a World of Climate Chaos, and you have the power to do something to prevent this: decree a Solar Feed-In Tariff that accelerates the change to solar power generation.

Sincerely yours,

Warwick Buckingham."
