

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Sunday, 21 May 2017**

11:51:28 AM

It seems like the low feedback rate now being given to solar owners is some sort of 'payback' against early solar adopters in a bid to recoup some of the, I admit generous, early feedback rates. The new feedback rate, ongoing, should be equal to the applicable rate (shoulder/peak) rate that the supplier is charging our neighbours at the time of our panel feedback less the cost of the suppliers administration which as it is computerised should be fairly negligible.

Solar households are doing their bit for a cleaner environment and have made substantial investments in doing so.
