SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

10:12:52 PM

I support a fair price for feed in solar power. The FIT should be between 15 and 18 cents and be regulated that retailers have to offer this as a minimum. My solar system cost a large sum and this tariff offers a reasonable return on my investment. My local wholesalers charges are too high for daily supply charge. I need 4 to 6 hours of sunshine to just to pay the daily supply charge! Going off grid is looking more viable.
