Submission: "I have had 1.5 kw of Solar Panels for seven years and at the current of 11.1 cents per kw it will take another 4 years to get back the money I paid for the eight solar panels. I installed solar panels to help reduce the Carbon discharged into the atmosphere by Coal Power stations. I have a Gross Meter so my electricity generated by the solar panels goes directly to my neighbours (I live in [REDACTED], Sydney). This saves AGL the cost of poles and wires. Therefor I think I should be paid at least 22.2 cents per kw. New South Wales can not continue to use coal for generating electricity. More solar panels are needed on houses. I will increase mine if AGL pays me 22.2 cents per kw."
