**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

1:15:16 PM

1. I have been a solar owner for over 10 years and support a fair price for solar .The current tariff of 6 cents is hardly fair and is an exploitation of solar owners.
2. The feed in tariff should not be just a benchmark range but should be regulated so retailers have to offer it as a minimum.
3. The tariff should increase in line with the wholesale price of electricity so that the benefits are not eroded with each price increase.
- 4 The tariff should represent the true value of solar not just financially but also environmentally.
