**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

2:46:42 PM

I am writing to entreat the NSW Government to regulate the feed-in-tariff from roof top solar systems.

I have had roof-top-solar panels for 9 years contributing to the manufacturing of electricity. During this time I received a fair price for the electricity I produced whilst also paying additional amounts on my quarterly bill.

Since the expiry of the government contract on feed-in-tariff my electricity bill has increased by 200%. This is because the retailer can pay whatever they like. The feed-in-tariff should be in line with the wholesale price and regulated so retailers offer it as a minimum.

It is important there is acknowledgement of the feed-in-tariff's true value to environment, public health and the economy through innovation and employment.
