Submission: I represent the 88 financial members of Leggy Point Boardriders Club Inc. of 2018. I have been asked to make a submission on behalf of all of our members. All members are against any variation to the current agreement. If Solo Water are unable to cater for the increased volume of sewage due to the proposal to increase the number of houses then there should be no increase in development unless Solo Water connects to the main sewer line. If they are unable to do so then they must revert to the original plan and simply manage the current number of houses they can control adequately. I cannot believe that the application to increase the number of houses was granted without a plan outlining how the sewage would be managed with the current treatment works provided. How did this occur? In this day and age the proposal that partially treated sewage be fed into Catherine Hill Bay Creek which will then flow out to the beach is ludicrous. Once more greed has outweighed common sense.
