Submission:

- I believe, the residents that contribute to Greener energy should atleast be given 1 to 1 credit for the every unit they feed into grid. e.g. If I feed in 100 units and I consume 120 units, I may be charged only for 20 units. There is a substantial difference between feedin and consumption tarriff.
- Residents are doing something for the community by producing green energy. This doesn't give them sufficient incentive to move or enhance greener.

Thanks
