Submission: To whom it may concern

We all pride our self living in a country like Australia and we love our multicultural society but in the last couple of years I have started to observe people I knew for years struggle with paying bills for basic primary resource(s). These resources are a right to any contributing citizen which I believe should be available and made available and affordable to any socioeconomic class.

I'm writing this submission regarding water increase proposal and indeed do have a concern for the long or short term future of the low to med class socioeconomic communities and retirees who can no longer afford to pay for a basic nessacity like water.

I hope the submission can help Ipart in the decision making of any price increase current or futuristic effecting large proportion of our population.

Kind regards,

■
