Submission: From the flyer enclosed with my latest water bill, I note that prices are set every four years and are due to be revised July 2015 to commence July 2016.

From my records, the price increases since 2007 to 2014 have been as follows

Water rate - \$1.264 increased to \$2.232 - a 76% increase

Water Service - \$16.10 increased to \$28.51 - a 77% increase

Sewer Service - \$97.36 increased to \$148.10 - a 52% increase

These increases are a joke, and a long way above CPI figures over the same period.

On what basis can IPART ( and I sincerely doubt the independence of IPART ) justify these increases ? And the next ones ?

Enough is enough !

On the basis of these past increases, there should be NO increases at all.
