Submission: I object to continual increases to transport fares; there has to be a cap for seniors. I would be prepared to pay up to \$5 a day but more than that would force me into a car. Your proposal whilst is only for 3 years, must have a cap otherwise it will continue to rise every year.

Many seniors make up the vast numbers of volunteers that run and support organisations to benefit others and increases to fares will severely affect this in the long term. This will also result in more services being paid for by government.

Having had the benefit of a seniors card for 2 years it has benefited me to travel to visit my mother travelling from Bomaderry to Warilla; although it has not cut travel time it has cut my carbon emissions from driving. More cars on the roads will result from a fare increase and this will have an impact on climate change.

The government subsidises forests and mining what about cutting out those subsidies. As well cut free travel for students, which would reduce the numbers for students clogging up public transport at peak times.
