Submission: I am writing because I believe the current system of charging for wastewater is unfair. I own vacant land with a water connection and am charged \$148.07 per quarter for wastewater service despite not generating any.

Wastewater charges should be linked to water usage because the more water you use the more will be discharged into the sewer. Alternatively the charge should be waived for vacant land.

I have raised the issue with Sydney water who have told me the system is not flexible.

Why should I get charged for wastewater if I do not generate any? Is this legal?

Yours sincerely

Bob Slaughter
