Submission: I live 150 metres of the proposed sewerage plant and friends live about 50 metres form the sewerage plant. This is far to close which will make it almost impossible to sell my home when I need to move into the retirement village. The effect of any malfunction is likely to impact on existing homes that are less than 300 metres. This is unacceptable and unfair.

Given the size of the development the developer should be required to locate the sewerage plant in a place which does not adversely effect the existing homes. The development is huge which would be able to locate the plant in a more suitable location.

Thank you for considering my request.
