Submission: Re: Water Prices.

The actual price of water on my bill last time I looked was only around 25% of the actual bill.

Why would any one bother saving water when it makes up such a small amount of the bill. As always it is the government charges which hurt every body.

Water wasters are not penalised.

Water rates should be pro rata, and the litre per use include the fixed charges - so bigger users pay more.

Hoping you can change your ways, as so many people try hard - but the 'system' is stuffed. Please set a good example. Drop the charges back - ramp up the water cost, to get everyone on board, and set a good example for all. You are the one in the Leadership role here.
