Submission: I have lived here for 6 years now. During heavy rainfall there is insufficient drainage to cope and we constantly find our garden and under our home flooded.

The Plot of land allocated to this sewage recycle plant is surrounded by known swamp area.

The utility is also planned to be positioned close to the Centre of town including preschool community center church shops and existing housing.

I understand that there are two similar but smaller facilities that were approved at wyee and Pitt town by yourselves. However their positioning is nowhere near the town or built up areas.

my main concern is water overflow. I feel that as we have constant issues with drainage in the area, overflow From The Utility Would Be Difficult If not Impossible to control.

Also I am concerned about the noise Pollution from heavy plant movement So close to our homes, dust pollution and possible smell. Also the huge impact to wildlife in our area
