Submission: according to your proposed fare structure and the accompanying explanation , it seems to suggest that approx.60% would pay less but I've done the calculations and if this is passed through , regular commuters such as myself who don't game the system will face a cost of living increase and will find it more attractive to drive to work. I urge to not proceed and to keep the existing fare structure , it benefits the majority as is and i also come with grievances on your use of a year on year fare modelling.Although , it is true that it is lower in 2016 you plan on increasing it in subsequent years , to recapture lost revenue. I urge you to reconsider as traffic congestion will only cost the state more , if you price people out of the ultimate incentive to use public transport over private vechicles . good day and goodbye
