Submission: This sewerage plant proposal needs to be re-thought. It is planned adjacent to already established homes. In fact, just across the road. This will provide these houses with regular unpleasant smells and the risk of overflows in heavy rain as the land is almost swampland. It will very much devalue the value of these properties, and that is so unfair. Surely the developers could acquire land on the opposite and undeveloped land side without offending or affecting local residents. Thank you for this opportunity.
