Submission: Travel concessions play an important part in Seniors and Self funded retirees using such transport, it benefits both transport revenue and passenger usage which provides safe travel, both for my family and others by numbers on services. Also would isolate a large number of older people unable to drive. I noted Traffic Commander John Hartley's reference to older drivers not driving. What does the Government really want?

There comes a point in cost when using our cars would be more convenient. This would only be adding more vehicles to an already untenable road situation, and given the deaths currently occurring in greater numbers make the proposal unwise?.

Therefore i suggest that a little bit of reasoning be given to the proposal instead of the usual cost increasing that that seems to be the knee jerk reaction to most problems.

Our vote could be valued next election as everything seems to making waves lately.
