Submission: Opal card solution:

No matter how many times the opal card has been tapped, the customers will not get the free transport until they have spent \$65 within one week. In the case, customers who live far from the city centre might only tap 6 times to get the free transport because their one way cost is higher and they spend \$65 quicker than those who live close to the city centre. Every year, this cap price should be adjusted according to the CPI index.
