Submission: I feel that an increase in seniors and pensioners public transport costs would be counter productive. At present many seniors use public transport. This proposal will encourage them to use their cars instead ,with an increase in pollution and a decrease in transport revenue the result. It is the same idea as the cross city tunnel - increase the toll and lose customers - decrease the toll and they will come flooding back.

This proposal has angered many of the people I know - especially those who are self funded retirees, who are not wealthy and who rely on the vagaries of the stock market.
