Submission:

I currently have solar with a feed in tariff from the government. But when it ends I will be giving free electricity to energy companies to sell at a profit for free, I will get nothing! That is not fair, providers should pay a fair price for my feed in power. If not then I do intend shutting my system off and will encourage others to do so until a fair price is paid. For companies to consider penalising households with solar systems as per the weekend Australian article 25-26 may 2013, is a disgrace!
